

**Vaccines are an important part of protecting us from many serious diseases. They not only can help keep us and our families stay safe from illness but also our community in general. Childhood vaccines particularly are vital in the fight against the spread of illness, disability or even death. Starting at birth and continuing through our children's early years of life and beyond, recommended vaccines are given to protect them along the way.**

**Routine well child exams and immunization updates are a great way to keep your children safe from many diseases. If you are interested in scheduling a well-child exam and getting your child's vaccines updated, please call 715-284-1900 to schedule an appointment.**
